	/Annan Q Shang/ Primary Examiner, Art U	nit 2424	

Continuation of 11. does NOT place the application in condition for allowance because: With respect to the rejection of the last office action mailed on 07/11/08, Applicant discusses the prior arts of record (Leuca et al '6,201,797' in view of Podowski et al '5,524,272') and the claimed invention and further argues that the prior arts of record do not teach the recited claims limitations (see pages 8+ of Applicant's Remarks).

In response, Examiner disagrees. Examiner notes Applicant's arguments, however, Applicant discusses the individual prior arts of record without considering the rejection as a whole. As discussed in the office action, Leuca discloses a communication system (figs. 1 and 2) for a mobile platform (Airborne), the mobile platform being stationary at a docking area. Leuca discloses a server (33) located in groundbased station (figs 1, 2, col.3, line 18-44 and col.4, line 27-61) and comprising a wireless transceiver, a first satellite receiver, and first storage unit, the server (Server 33) being configured to store order data received by the first satellite, and to store video data received by the first satellite receiver in the storage unit in response to the order wire data (col.2, line 58-col.3, line 20 and line 31-col.6, line 14), Leuca further discloses a satellite receiver on the mobile platform (Aircraft 40); a wireless docking area transceiver; a wireless platform transceiver; a wireless platform transceiver on the mobile platform receiving order wire data and video data from the wireless docking area transceiver while the mobile platform is at the docking area; and a storage unit (server 12), the storage unit being located on the mobile platform, the wireless docking area transceiver providing the video data and the order wire data to the wireless platform transceiver while the mobile platform is at the docking area, where the storage unit stores the video data for playback in the mobile platform and the storage unit storing the order wire data, the order wire data controls a source of video playback of a program being either video data in the storage unit or the satellite receiver, or both the storage unit and the satellite receiver (col.2, line 58-col.3, line 20 and line 31-col.6, line 14). Leuca, teaches a ground-based station, but silent as to the claimed limitation docking area for receiving order wire and video Idata from a distribution center, and communicates data to the mobile platform while the mobile platform is at the docking area. In analogous art, Podowski discloses a docking area [terminal] for a mobile platform [aircraft] (see fig. 1) at which various entertainment and control data are communicated from a distribution center to said mobile platform (see cols. 2-3). Located in the docking area is a server, [41] (fig. 4; col. 3, 11.40-45) comprising a satellite receiver [42] and a storage unit [44] (fig. 4) for storing video data and other data received by the satellite receiver [42] (col. 5, 11.5-35) and subsequently relaying the data to the mobile platform while the mobile platform is at the docking area (col. 6, 11,22-38). In response to information transmitted therewith, the server buffers information packages provided by the distribution center until the information is to be transferred to its respective mobile platform (col. 5, 11.40-53), thereby simplifying the distribution process as experienced by the distribution center (col. 3, 11.54-63). Hence the rejection is proper meets all the claims limitations. The finality of the last office action is hereby maintained.
